WARNING: AFTER SEARCHING THE USPTO DATABASE, EVEN IF **YOU** THINK THE RESULTS ARE "O.K.," DO **NOT** ASSUME THAT YOUR MARK CAN BE REGISTERED AT THE USPTO. AFTER YOU FILE AN APPLICATION, THE USPTO MUST DO ITS OWN SEARCH AND OTHER REVIEW, AND MIGHT REFUSE TO REGISTER YOUR MARK.

Search Term: "filemaker pro"

Field: Combined Word Mark (BI,TI,MP,TL) [▼]

Result Must Contain: All Search Terms (AND) [▼]

This *New User (Basic)* search form allows for searching of the most commonly searched fields: word marks, serial or registration numbers, and owners.

The **Combined Word Mark** is the default search field and includes the **word mark** and **translation**.

Use the $ for truncation in any field. For **Combined Word Mark** searches, the * is a more efficient truncation operator for left and/or right truncation. For example, the search term ***DOG*** with the **Combined Word Mark** will retrieve marks with common variations of the word DOG in the word mark or translation statements. Use of the $ truncation operator sometimes results in a truncated hit list.

For serial number or registration number searches, enter the 8-digit serial number (e.g. 75123456) or 7-digit registration number (e.g., 1234567) and select *Serial or Registration Number* as the *Field* for the search. If multiple serial or registration numbers are searched, separate the numbers by spaces and change the *Results Must Contain* value to Any Search Terms (OR). (Alternatively, separate the number by the Boolean OR operator without adjusting the *Result Must Contain* value.)

Do **NOT** include the apostrophe for contractions. For example, search for the word **DON'T** by searching **DON T**. Including Boolean operators (e.g., AND, OR, NOT) or proximity operators (e.g., ADJ, NEAR, SAME, WITH) in your search will override the *Result Must Contain* setting for the search. To actually search for these Boolean or proximity operators, include quotes around the operator.

1 PL/I program efficiency
Michael McNeil, William Tracz
June 1980 **ACM SIGPLAN Notices**, Volume 15 Issue 6

Full text available: pdf(1.29 MB)   Additional Information: full citation, abstract, references, citings

All PL/I Programmers should be aware of and genuinely concerned about PL/I Program efficiency. This paper addresses the following question:"How do you write a PL/I program which the PL/I Complier will reduce to the smallest and fastest executing machine language module?" The real world payoffs of knowing how the PL/I Optizing Compiler handles different syntactical representations of similar semantic relationships with respect to code generation and storage allocation can increase program runtime ...

1 Computation of the Frequency Function of a Quadratic Form in Random Normal Variables
Walter F. Freiberger, Richard H. Jones
July 1960 **Journal of the ACM (JACM)**, Volume 7 Issue 3

Full text available: 📄 pdf(314.99 KB)   Additional Information: full citation, abstract, references, index terms

One of the outstanding problems in the theory of time series analysis is the distribution problem in spectral analysis for small samples. When the number of observations is sufficiently large for the Central Limit Theorem to be applicable, the normal approximation can be used to advantage. In recent years, work has aimed at the discovery of more generally applicable approximate methods and of more rational criteria for the sample size at which the large sample theory becomes useful; the sta ...

2 Development consortium: Office environments for CSCW in design and architecture
Barbara Freiberger, Dieter Mankau, Wolfgang Müller
April 2000 **CHI '00 extended abstracts on Human factors in computing systems**

Full text available: 📄 pdf(311.39 KB)   Additional Information: full citation, abstract, references

In this paper, we propose a novel paradigm for office environments with the focus on the rapidly changing work processes in the fields of design and architecture. The proposed environment supports the dynamic modification of teams, the mobility of the whole system, and the interaction possibilities with others with the aid of new technological developments and the segmentation of a projected desktop. We suggest additional workflow components (with appropriate visualization techniques), which sup ...

> Expert systems are a well-known and well-received technology. It was thought that the performance of a domain expert could not be duplicated by a machine. Expert systems technologies have shown this to be a false belief, and indeed have demonstrated how experts themselves can come to depend on expert systems. Expert systems enjoy widespread use in industrial domains and further uses are planned. The growth in acceptance has been explosive since about 1986. Continued rampant growth appears t ...

1 Fuzzy Logic and the Resolution Principle
Richard C. T. Lee

2 Adaptive cooperative fuzzy logic controller
Justin Ammerlaan, David Wright
January 2004 **Proceedings of the 27th conference on Australasian computer science – Volume 26**

Full text available: ▧ pdf(324.34 KB)   Additional Information: full citation, abstract, references

Fuzzy logic is a natural basis for modelling and solving problems involving imprecise knowledge and continuous systems. Unfortunately, fuzzy logic systems are invariably static (once created they do not change) and subjective (the creator imparts their beliefs on the system). In this paper we address the question of whether systems based on fuzzy logic can effectively adapt themselves to dynamic situations.To answer this question, we firstly design and implement an adaptive fuzzy logic agent for ...

3 Improving object-oriented methods by using fuzzy logic
Francesco Marcelloni, Mehmet Aksit
December 2000 **ACM SIGAPP Applied Computing Review**, Volume 8 Issue 2

Full text available: ▧ pdf(904.41 KB)   Additional Information: full citation, abstract, index terms

Object-oriented methods create software artifacts through the application of a large number or rules. Rules are typically formulated in two-valued logic. There are a number of problems on how rules are defined and applied in current methods. First, two-valued logic can capture completely neither method developers' intuition nor software engineers' perception or artifact types. Second, artifacts are generally produced based only on a subset of relevant properties. Third, two-valued logic does not ...

5 Fuzzy-logic digital-analogue interfaces for accurate mixed-signal simulation
T. J. Kazmierski
February 1998 **Proceedings of the conference on Design, automation and test in Europe**

Full text available: pdf(48.45 KB)   Additional Information: full citation, abstract, references, index terms
Publisher Site

A new approach to mixed-signal circuit interfacing based on fuzzy logic models is presented. Due to their continuous rather than discrete character, fuzzy logic models offer a significant improvement compared with the classical D-A interface models. Fuzzy logic D-A interfaces can represent the boundary between the digital and analogue worlds accurately without a significant loss of computational efficiency. The potential of mixed-signal interfacing based on fuzzy logic is demonstrated by an exam ...

6 Tutorial on fuzzy logic in simulation
M. Luisa McAllister, Sergei A. Ovchinnikov, John T. Dockery, Klaus-Peter Adlassnig
December 1985 **Proceedings of the 17th conference on Winter simulation**

Full text available: pdf(521.16 KB)   Additional Information: full citation, abstract, references

The objective of this tutorial is to introduce to the simulation community another tool that is now available. This tool is best known under the name of Fuzzy Set Theory. This tutorial contains a brief discussion of the current trends in simulation which we believe justify the need of this new tool. Kept to a minimum, the Introduction to fuzzy sets will be strictly limited to the case of a finite number of elements. Most attention will be devoted to fuzzy logic. It is precisely fuzzy logic ...

9 Application of fuzzy logic to approximate reasoning using linguistic synthesis
E. H. Mamdani
May 1976 **Proceedings of the sixth international symposium on Multiple-valued logic**

Full text available: pdf(433.69 KB)   Additional Information: full citation, abstract, references, index terms

This paper describes an application of fuzzy logic in designing controllers for industrial

plants. A Fuzzy Logic is used to synthesise linguistic control protocol of a skilled operator. The method has been applied to pilot scale plants as well as in a practical industrial situation. The merits of this method in its usefulness to control engineering are discussed. This work also illustrates the potential for using fuzzy logic in modelling and decision making. An avenue for further work in th ...

Diagnosing analog circuits with their numerous known difficulties is a very hard problem. Digital approaches have proven to be inappropriate, and AI-based ones suffer from many problems. In this paper we present a new system, FLAMES, which uses fuzzy logic, model-based reasoning, ATMS extension, and the human expertise in an appropriate combination to go far in the treatment of this problem.

1 A decision support expert system for correction of manufacturing process problems

Alan S. Grier, Roger C. Hsiao

June 1990 **Proceedings of the third international conference on Industrial and engineering applications of artificial intelligence and expert systems - Volume 1**

Full text available: pdf(906.29 KB)　　Additional Information: full citation, abstract, references, index terms

As computer-integrated manufacturing technology replaces human operators with robots and automated equipment, the thinking and reasoning abilities of the operators are also removed. Unexpected events in a manufacturing operation are an everyday occurrence, so the loss of the operator's reasoning abilities in solving process problems can be devastating. In order to keep complex equipment functioning efficiently, a decision support expert system prototype for correcting machining process prob ...

2 Framework of the decision support expert systems

Pawel Radzikowski

January 1984 **Proceedings of the 16th conference on Winter simulation**

Additional Information: full citation, abstract, references, index terms

Recent advances in Artificial Intelligence have produced computer systems displaying human expert level expertise in several particular disciplines like medicine, organic chemistry, education, geological exploration... The Expert-System-Building systems became available and paper reviews prospects for their incorporation into DSS proposing Mixed Binary Linear Goal Programming (Discriminative Optimization in particular) as a framework for Decision Problems.

3 Software development: Using UML and agile development methodologies to teach object-oriented analysis & design tools and techniques

Jeffrey Brewer, Leslie Lorenz

October 2003 **Proceeding of the 4th conference on Information technology education**

Full text available: pdf(171.34 KB)　　Additional Information: full citation, abstract, references, index terms

The world of software development and systems integration continues to evolve into an object-oriented (OO) based environment. The advent of new development platforms such as Microsoft's .Net and Sun's J2EE has accelerated the adoption rate of OO based tools and the object-oriented development paradigm. Tomorrow's workers need to be equipped to describe a world made up of objects - whether the objects are self created or inherited from an existing object framework. In addition to offering OO soft ...
